Organization: DLA Piper Global Law Firm

General Comment

DLA Piper Global Law Firm is pleased to provide a beta version of its Artificial Intelligence Scorebox in response to the National Institute of Standards and Technology's RFI (NIST-2021-0004-0001) to help inform the development of a framework for managing risks associated with artificial intelligence.

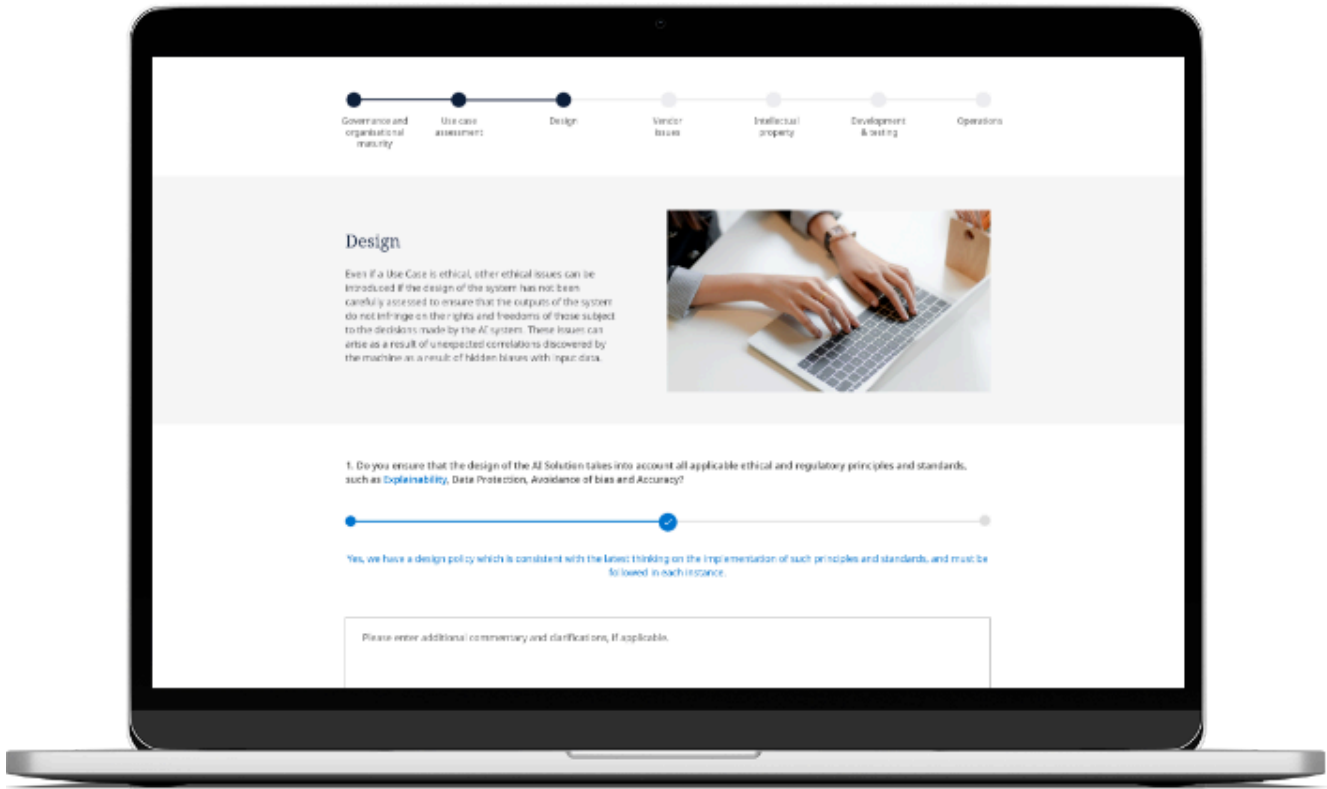

DLA Piper built its AI Scorebox as a means to help organizations and businesses assess AI adoption readiness and governance maturity based on a series of questions and criteria. DLA Piper's global team assessed various approaches to AI regulation being developed by governmental organizations including the G20, OECD, European Commission, Council of Europe, White House Executive Order 13859 and many others. This "common ground" analysis led to the synthesis of key concerns and risks for the deployment of complex AI technology use cases in an ethical and legally compliant way.

For all organizations we would suggest the involvement of legal, technical, financial, ethics, and senior leadership since the deployment of AI is something that needs to be assessed from many perspectives within an organization. By utilizing this AI Scorebox, organizations around the world can prepare and position themselves in the best way possible for adopting sustainable AI technologies into their business models.

We believe our AI Scorebox is consistent with NIST's intent to frame the development of new approaches to address characteristics of trustworthiness, including accuracy, reliability, privacy, security and safety.

To access the beta version of DLA Piper's AI Scorebox, please use the following address: <http://ai-scorebox.opencms.co.za/index.html>.

DLA Piper is a global law firm with lawyers located in more than 40 countries throughout the Americas, Europe, the Middle East, Africa and Asia Pacific. DLA Piper established its Artificial Intelligence practice in May 2019.

DLA Piper AI Scorebox

Our AI Scorebox is a global tool used to determine an organisation's AI maturity, which is benchmarked against other organisations in a particular sector. This is achieved by looking at the organisation's AI maturity overall, as against regulation and best practice, as well as the maturity of a particular AI solution.

Compliance considerations

Understanding how to use AI within a business is not easy. Organisations not only need to take into account a myriad of regional, national and sector specific guidance, but also the draft regulations, opinions and guidelines. However, these drafts and whitepapers are generally based on the same key principles. Knowing how well an organisation is aligned with each of these basic principles allow organisations to focus their energy and resources where they are needed, and develop an appropriate compliance programme.

Survey-based input

The AI Scorebox is completed by filling out a short online questionnaire. Each multiple-choice answer has a weighting which is used to produce a score for each of the areas of AI compliance and awareness.

Instant reporting

Immediately after having filled out the form you will be provided with an automatically generated report that indicates your global score and provides you with a detailed score on several AI topics.

Easy benchmarking

Our tool also enables you to compare your organisation's scores with the average scores of your peers (based on sector, size and reach).

What users are saying

"Organisations around the world are already waking up to the need to demonstrate how AI can be used ethically and safely. Various market leaders are already developing and implementing formal AI policies and their commitment to safe, fair and non-discriminatory practises. This type of forward-thinking, along with the imminent introduction of punitive legislation, underlines the need for organisations using AI to do so with an eye on both the market and the legislative backdrop. The AI Scorebox can provide valuable information to enable businesses to implement the changes needed to satisfy both consumers and regulators."

Mark O'Connor, Intellectual Property & Technology partner at DLA Piper

Access tool

DLA Piper is a global law firm with lawyers located in more than 40 countries throughout the Americas, Europe, the Middle East, Africa and Asia Pacific, positioninus to help clients with their legal needs around the world.
